

JustCmul8 — Node Glossary

Technical block names simplified into plain language, for users with no simulation background

Basic Blocks

Block Name	Meaning
Start Point	Jaha se visitors entry lete hain hamari simulation mein.
Waiting Line	Jaha pe visitors apni chance ka wait karte hain.
Exit Point	Jaha pe visitors exit karte hain.
Counter	Jaha pe user interact karega — yeh actual service/processing step hai (jaise ek staff visitor ko serve kar raha hai).
Limited Counter	Jaha pe sirf ek fixed number of users ek time pe interact kar sakte hain (jaise sirf 2 counters khule hain).
Priority Counter	Jaha pe koi high-priority wala user pehle interact karega, baaki sab ke aage.
Decision Block	Jaha pe user koi decision lega — jaise left pe jana hai ya right pe.

Advanced Blocks

Block Name	Meaning
Storage Tank	Jaha pe liquid ya material (jaise paani, cement) store hota hai — individual visitors ki jagah bulk quantity track hoti hai.
Storage Rack	Jaha pe limited number ke items ya parts rakhe jaate hain, jab tak unka use na ho — jaise ek warehouse shelf.
Event Trigger	Jaha pe ek fixed time ya condition pe khud-ba-khud koi action shuru ho jaata hai — bina kisi visitor ke aaye.
Transport Channel	Jaha pe visitor ya item ek jagah se dusri jagah tak travel karta hai, kuch fixed time lekar — jaise ek conveyor belt ya road.
Broadcaster	Jaha pe ek hi visitor/signal ek saath multiple raaston pe bhej diya jaata hai.

Block Name	Meaning
Any-One Gate	Jaha pe system tabhi aage badhta hai jab in mein se koi bhi ek cheez ho jaaye — sabka hona zaroori nahi.
Wait-for-All Gate	Jaha pe system tab tak rukta hai jab tak saari cheezein ek saath complete na ho jaayein.
Breakdown Block	Jaha pe chal raha kaam beech mein rok diya jaata hai — jaise machine kharab ho jaaye ya emergency aa jaaye.

Note: All 15 simulation node types are covered above — 7 basic blocks (everyday building pieces) and 8 advanced blocks (for more complex, specialised scenarios). Every technical term a user sees in the editor maps to one plain-language entry here.
